

benefits of Freight2020?

MAXIMISE your efficiency, revenue, productivity, customer services and profitability

MINIMISE your revenue leakage, duplication, downtime, lost business, lost paperwork and costs

what's being said about CMS & Freight2020?

“CMS have been my strategic technology partner for 15 years. Freight2020 has been the catalyst that has allowed Mannway to manage the massive growth that has been our success.”

Stuart Brown - CEO, Mannway Logistics

“We chose Freight2020 based upon the scalability of the solution and their willingness to understand McColls business. They have delivered time and time again developments that have allowed us to become more efficient and more profitable.”

Terry Fletcher - GM, McColls Transport

“Freight2020 is the key to running a successful transport business. Since going live we have seen our costs fall while our revenue increases. I fully recommend speaking to their switched on team.”

Daryl Pickering, Managing Director, Pickerings Transport

Freight2020

"Now you can operate with perfect vision"

The Power of Integration

A totally integrated approach to logistics solutions reduces duplication of data collection while improving the visibility of useful information across the business. By making relevant information available when required better decisions can be made for the business. This will drive greater productivity through increased efficiency and ultimately improved profitability.

The Speed of Automation

In automating tasks which are time consuming or repetitive such as rating Freight2020 is able to increase accuracy while reducing the time taken to achieve the end result. In terms of rating this means that the task occurs with out human intervention, is consistently accurate and decreases the time taken to raise an invoice. The final benefits here are an increase of business activity without increasing resources while reducing outstanding debtor days.

Fitting the Pieces

The Comfort of Security

Freight2020 has been designed and constructed with the modern needs of information security in mind. This starts with the user, where not only passwords can be established; through the user profile the system can determine what content is visible to the user. This allows you the ultimate in control over commercially sensitive information that is collected as part of running your business.

The Value of Reporting

Collecting vast quantities of data into a business wide solution can only be useful if the data can be turned into useful information. Freight2020 has a comprehensive reporting function which allows information to be delivered into many different formats. The benefit here is that KPI reporting for internal business improvement purposes or external customer purposes can very quickly be created into a format that make sense to the recipient.
